

SLIDE 1: PLATINUM GROUP

SLIDE 2:CRIME AND LAWLESSNESS

- We have created a system, Mobile platform

That will help in dealing with the problems.

The name of the system is:Gauteng Integrated Law Enforcement Command Dashboard (GILECD)

SLIDE 3: CRIME CHALLENGES IN GAUTENG

- Current Problems:
 - Carjacking: Fast-moving vehicle thefts overwhelm response times.
 - Cash-in-Transit (CIT) heists: Coordinated armed attacks require rapid multi-unit coordination.
 - Human trafficking: Victims moved across routes with limited real-time visibility.
 - Kidnapping/Abductions: Critical first hours are often lost due to fragmented information.
 - Challenge: CCTV, patrols and aerial assets often operate in separate systems, delaying decisions.

SLIDE 4: GILECD SOLUTION

- Gauteng Integrated Law Enforcement Command Dashboard (GILECD):
 - Unified command dashboard for incidents, patrols, CCTV and drones.
 - IoT integration with CCTV, GPS-enabled patrol vehicles, drones and panic devices.
 - AI-assisted CCTV analytics can flag suspicious activity for operator review.
 - Interactive Gauteng map with incident locations, patrol units and resource status.
 - Mobile app sends alerts and assignments to officers in the field.

SLIDE 5: HOW THE SYSTEM RESPONDS

- Operational Workflow:
 1. CCTV or public report identifies a suspected incident.
 2. Operator verifies the alert and creates/updates an incident.
 3. System recommends nearest patrol units and available drone.
 4. Drone provides aerial situational awareness and shares live location updates.
 5. Officers receive navigation and updates through the mobile app.
 6. Command centre monitors progress until the incident is resolved.
- *Prototype uses simulated data and placeholder integrations.*

SLIDE 6: BENEFITS TO SAPS AND GOVERNMENT

- Expected Outcomes:
 - Faster incident awareness and coordinated response.
 - Improved deployment of SAPS and municipal law enforcement resources.
 - Better situational awareness through integrated CCTV and drone feeds.
 - Stronger evidence collection through centralized incident records.
 - Data-driven hotspot analysis to support proactive patrol planning.
 - Scalable platform for future Smart City and IoT integrations.
